

SYSTEMS AND METHODS FOR  
REDUCING CUT-OFFS IN PROGRAM RECORDING

Abstract of the Disclosure

5 [0091] A media recording system may be provided.  
The recording system may include features for reducing  
recording cut-off of a particular media event due to  
changes in the start time and end time of what is  
scheduled to be recorded. The recording system may  
10 provide a user with an opportunity to select a program  
by for example, selecting a listing, to have that  
program automatically recorded at a scheduled time for  
presentation to viewers. Changes in the schedule of  
programs may be compensated manually or automatically  
15 when the recording system receives information about  
actual or predicted time changes. In a manual mode, a  
user may adjust start or end times based on time change  
information that is displayed. For an automatic mode,  
the recording system may automatically compensate for  
20 predicted or actual time changes that are known by  
automatically adjusting the start and end times of  
recording.
